Summary

Mechatronics Engineer with experience in full-stack software development, focusing on web solutions, mobile applications, and database management. Proficient with front-end frameworks like React and Next.js, and back-end technologies such as .NET (ASP.NET Core), Laravel, and Django. Focused on writing clean code, automating workflows, and delivering functional native and web applications, with practical experience in logistics and field service systems.

Skills

- **Languages:** C#, JavaScript, TypeScript, Python, PHP, C++, HTML5, CSS3.
- **Frameworks & Tools:** React, Next.js, Angular, React Native, Laravel, ASP.NET Core, Django, Bootstrap, Tailwind CSS.
- **Databases & DevOps:** SQL Server, PostgreSQL, MySQL, MariaDB, Azure DevOps, Git, App Store Connect.
- **Automation & Specializations:** Mobile App Deployment, RESTful APIs, Web Scraping (Selenium), Robotic Process Automation (RPA), Object-Oriented Programming (OOP).
- **Soft Skills:** Analytical problem-solving, cross-functional teamwork, English (C1).

Experience & Projects

Software Developer

ENKONTROL | *October 2025 - Present (Remote)*

- **Full Stack Application Development:** Developed web solutions using React and .NET (ASP.NET Core) to support internal enterprise operations.
- **Frontend Implementation:** Built user interfaces with React and TypeScript, handling application state management using Redux.
- **API Development:** Created and maintained RESTful Web APIs to ensure proper data communication between services.
- **Database Management:** Managed and optimized SQL Server databases, updating stored procedures and triggers to improve query execution.
- **Version Control & Workflow:** Managed source code and task tracking via Azure DevOps and Git branching strategies.
- **Maintenance & Support:** Resolved reported bugs and maintained existing code to ensure application stability and meet support guidelines.

Software Developer

Woodward Group | *August 2024 - October 2025*

- **Web Development:** Developed the company's official website (woodwardgroup.com.mx) using React, Next.js, and Tailwind CSS.
- **Internal Systems:** Built corporate systems using the MVC pattern (PHP/JS) to handle internal business workflows.
- **Background Services:** Implemented .NET Core Worker services (HostedService/Timers) to handle automated background data processing tasks.
- **Database Support:** Administered SQL Server environments and wrote custom scripts to assist with data reporting.

- **Mobile Applications:** Maintained and updated cross-platform mobile applications using React Native.
- **Team Collaboration:** Worked alongside design and business teams to turn wireframes into functional software features.

Software Developer
Visa Logística | *April 2023 - August 2024*

- **Web Development:** Developed web applications featuring React frontends backed by Django servers.
- **Process Automation:** Created automation scripts and web scraping tools using Python and Selenium to reduce manual data-entry tasks.
- **Data Processing:** Developed file-handling utilities using Python and C#/.NET to process shipping documentation.
- **Database Logic:** Designed relational database structures in SQL Server and implemented triggers for data integrity.
- **Support & Maintenance:** Provided technical support, bug fixing, and platform updates within corporate response guidelines.

Independent Projects
MAVI Reportes (Mobile Solution) | *August 2026*

- **Mobile Development:** Developed a cross-platform mobile application for field maintenance and service tracking.
- **Backend Development:** Built a RESTful backend using Laravel and PostgreSQL for data storage.
- **Features & Deployment:** Implemented features including photo logging, digital signature capture, and automated PDF report generation; managed deployment through App Store Connect.

Commercial Fleet GPS Tracking System | *July 2026*

- **Frontend Development:** Developed the web frontend using Angular and Tailwind CSS, integrating routing configurations and tracking dashboards for operations teams.
- **Backend & Database Architecture:** Built the backend using .NET and Entity Framework, paired with a PostgreSQL database to process and store telemetry data.
- **Embedded Hardware Integration:** Programmed the ESP32 microcontroller to handle data requests, transmitting GPS positions and vehicle parameters to feed the database.

Education

Mechatronics Engineering
University of Colima | *2017 - 2022*

- **Project Collaboration:** Led student project teams focused on developing practical systems for operational challenges.
- **Programming Foundations:** Learned C++ and software development principles for application building.
- **Embedded Systems:** Programmed microcontrollers and integrated hardware components for project prototypes.
- **Technical Documentation:** Co-authored technical documentation summarizing project results.
